

Quarterly Epidemiological Commentary: mandatory MRSA, MSSA, Gram-negative bacteraemias and *C. difficile* infection - July to September 2021

1 of 2

Gram-negative bacteraemias (E. coli, Klebsiella spp. and P. aeruginosa)

#### P. aeruginosa bacteraemia

**July to September 2019** 

out of every 100,000 persons

developed a *P. aeruginosa* bacteraemia

**July to September 2021** 

9

out of every 100,000 persons developed a

P. aeruginosa bacteraemia

## Klebsiella spp. bacteraemia

**July to September 2019 July to September 2021** 

21 out of every 100,000 persons developed a

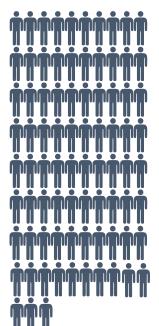

Klebsiella spp. bacteraemia

21
out of every
100,000 persons developed a

Klebsiella spp. bacteraemia

#### E. coli bacteraemia

July to September 2019

83

out of every
100,000 persons
developed an
E. coli bacteraemia

**July to September 2021** 

out of every
100,000 persons
developed an
E. coli bacteraemia

Quarterly Epidemiological Commentary: mandatory MRSA, MSSA, Gram-negative bacteraemias and *C. difficile* infection - July to September 2021

2 of 2

S. aureus (MRSA and MSSA) bacteraemia and C. difficile infections

### MRSA bacteraemia

1.4 out of every

**July to September 2019** 

**July to September 2021** 

1.2

out of every

100,000 persons developed an MRSA bacteraemia

100,000 persons developed an MRSA bacteraemia

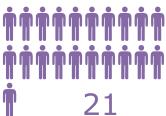

# MSSA bacteraemia

**July to September 2019** 

developed an MSSA bacteraemia

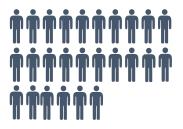

July to September 2021

out of every 100,000 persons developed an MSSA bacteraemia

### C. difficile infection

July to September 2019

26

out of every 100,000 persons developed a *C. difficile* infection

July to September 2021

28

out of every

100,000 persons
developed a *C. difficile* infection
