## Oral health of 5-year-old children

This profile describes the oral health of 5-year-olds living in Richmond upon Thames. It uses data from the National Dental Epidemiology Programme 2019 survey of 5-year-old children<sup>1</sup>.

The profile is designed to help local government and health services improve the oral health and wellbeing of children and tackle health inequalities.

In Richmond upon Thames 236 5-year-olds (approximately 60.5% of those sampled) were examined at school by trained and calibrated examiners using the national standard method<sup>2</sup>.

## Summary

In Richmond upon Thames average levels of dental decay are lower than the average for England.

The small sample sizes mean it is not possible to provide information at ward level for the whole area. Future surveys could be commissioned to provide larger samples to facilitate local analysis. Commissioning High Quality Information to Support Oral Health Improvement: A toolkit about dental epidemiology for local authorities, commissioners and partners is available to support the commissioning of oral health surveys<sup>4</sup>.

Public health interventions can improve child oral health at a local level. Local authorities improving oral health: commissioning better oral health for children and young people is available to support local authorities to commission oral health improvement programmes for children and young people aged up to 19 years<sup>5</sup>.
