# Everyone everyday

Characteristic(s) / CSF(s):  
Role of the authority  
Managing Expenditure  
Use of Data and Intelligence

## Problem and Approach

- The objective of the 'everyone everyday' initiative is to build the first large scale, fully inclusive, practical Participatory Ecosystem. To measure the value co-created by this Participation Ecosystem to establish it's viability as long term contributor of producing healthy, happy and resilient neighbourhoods.
- The connects approach to build and connect two platforms: Support Platform for growing projects, and; a Participatory Ecosystem for growing participation. The former is a collection of many support elements shared across all the projects, the latter is A collection of many and varied 'participation culture' projects.

## Outcomes

- After 9 years of research and 1 year building the initiative in Barking and Dagenham, there is a range of qualitative and quantitative data indicating that the systems approach is delivering value at the individual and neighbourhood level.
- These findings are at early stage and it is not possible yet to quantify the economic impact they are having upon individual residents, nor the accumulated effect borough- wide. This will be reported on more fully in Year 2 onwards
