

**Compendium of Recent Data Releases for London
Accompanying the Intelligence Update for
June 2020**

Contents

1. Provisional weekly deaths registered for the week ending 17 April 20202

1. Provisional weekly deaths registered in England and Wales for the week ending 17 April 2020

On 23 June 2020, the Office for National Statistics published weekly provisional figures on deaths registered in England and Wales in 2020 including where coronavirus (COVID-19) was mentioned on the death certificate. Data are up to the week ending 12 June 2020.

The data are provided by the date the death was registered and also the date the death occurred. There is usually a delay of at least five days between occurrence and registration.

Weekly data are presented by 5-year age group and sex for England and Wales as a whole and for persons of all age by region and local authority of usual residence. Cumulative numbers of deaths are also presented by place of death. Also published were provisional counts of deaths in care homes caused by the coronavirus (COVID-19) by local authority which are published by the ONS and Care Quality Commission (CQC) jointly. This contains daily mortality data in care homes reported to the CQC up to 5pm on 19 June 2020.

The data tables and further explanations and definitions can be accessed [here](#). This [article](#) explains the differences between various data sources that report on coronavirus (COVID-19) deaths.

Note: This briefing is produced on a weekly basis - This is the most recent briefing.

Key Points:

Daily deaths in care homes reported to the CQC

- There were 20 deaths from covid-19 in residents of care homes in England reported to the CQC on 19 June 2020. This brought the cumulative total of care home deaths from covid-19 from 10 April to 19 June 2020 to 12,075. This accounted for 36.0% of all deaths reported in care homes over this period.
- In London, 1 covid-19 death was reported to the CQC on 19 June 2020. This brought the cumulative total from 10 April to 19 June 2020 to 897 and accounted for 36.7% of all deaths reported in care home residents over this period.
- Within London, Enfield had the highest number of reported care home deaths from covid-19 across the period (n=74) and this accounted for 39.6% of all deaths in Enfield care homes.
- Tower Hamlets had the highest proportion of deaths in care homes from covid-19 across the period (76.7% of all deaths) but the number of deaths were lower at 23.

Figure 3: Deaths in care homes reported to the CQC by date of report up to 5pm on 19 June 2020, London

Notes:

1. Data provided by Care Quality Commission
2. Figures are for deaths CQC are notified of on the days specified. Figures only include deaths that were notified by 19 June 2020, and may be an underestimate due to notification delays.
3. Figures are for persons who were resident in and died in a care home
