

Updating ScrewDrivers from V4 to V6

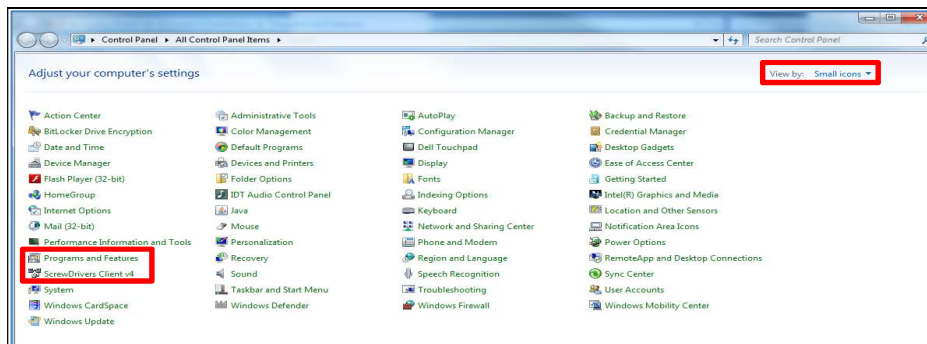

There is a new version of ScrewDrivers which is self-updating. All workstations should be updated to ScrewDrivers V6 as it enables the printing of pdf and large documents without freezing.

There are 3 steps to updating your version of ScrewDrivers.

Step One: Uninstall V4

Log out of Central Hosting and then go to Start and Control Panel

Change **View by:** to Small icons

Check you have ScrewDrivers Client v4

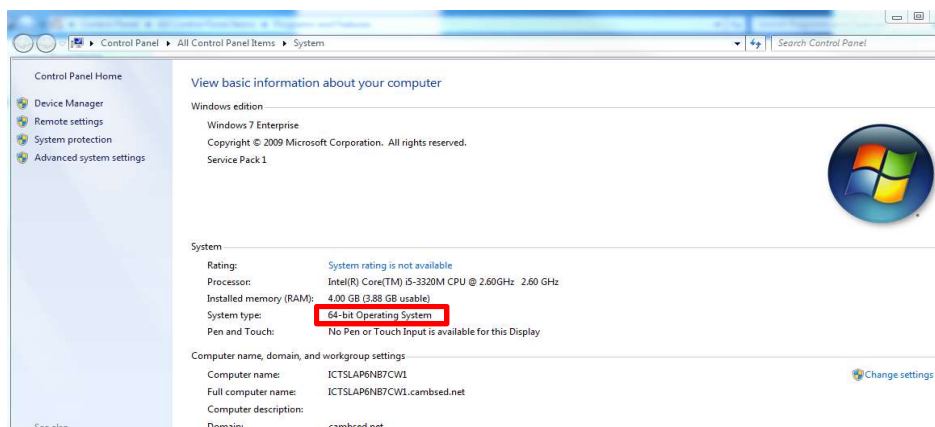

Open Programs and Features

Select ScrewDrivers Client v4 and click on Uninstall – **wait for the program to finish uninstalling before going onto the next step.**

Step Two: Check for 32 or 64 bit operating system

Left click the Start button

Right click on Computer and select Properties – under System Type make a note of whether 32 or 64 bit operating system

Step Three: Install ScrewDrivers V6

For 64 bit machines go to:

<https://chresources.cambsed.net/screwdrivers/ScrewDriversClient-x64.msi>

For 32 bit machines go to:

<https://chresources.cambsed.net/screwdrivers/ScrewDriversClient-x86.msi>

Click Run and Install (this can take some time to install)

Log back into Central Hosting and after 2 – 3 minutes your printers will appear.
